BIOELECTROCHEMISTRY AND BIOENERGETICS

Subject Index of Volume 40

Activated bioluminescence
Glucose activated bioluminescence of coelomic cells of *Lampito mauritii*: a novel assay of glucose (Haram et al.) 59
Active transport
Active transport of protons and electrons driven by redox enzyme reactions via G3P/DHAP shuttle, a model. Kinetics of activity and evolution of redox potential gradients (Demmano et al.) 239
Adsorption
Quartz-crystal microbalance and cyclic voltammetric studies of the adsorption behaviour of serum albumin on self-assembled thiol monolayers possessing different hydrophobicity and polarity (Anzai et al.) 35
Adsorptive potentiometry
Trace measurements of plasmid DNAs by adsorptive stripping potentiometry at carbon paste electrodes (Cai et al.) 41
AMA cells
The minimizing effect of electromagnetic noise on the changes in cell proliferation caused by ELF magnetic fields (Raskmark, Kwee) 193

Bacteria
Electrotransformation of bacteria by plasmid DNAs: statistical evaluation of a model quantitatively describing the relationship between the number of electrotransformants and DNA concentration (Rittich, Španová) 233
Bacterial growth
Effects of extremely low-frequency electromagnetic fields on bacteria —the question of a co-stressing factor (Mittenzwey et al.) 21
Binding sites
Electrochemical investigation of binding sites of plantacyanin: blue, copper-containing protein of plants (Kuznetsov et al.) 249
Bioelectrocatalysis
Electrochemical properties of some copper-containing oxidases (Yaropolov et al.) 49
Bioelectromagnetics
Evaluating the biological aspects of in vitro studies in bioelectromagnetics (Saffer, Phillips) 1
Biological cells
Dielectric spectroscopy of biological cells (Asami et al.) 141
Biological processes
Cell–cell interactions. A physical approach (Popescu) 153
Biological tissues
Problems in equivalent circuit modelling of the electrical properties of biological tissues (McAdams, Jossinet) 147
Biological variability
Evaluating the biological aspects of in vitro studies in bioelectromagnetics (Saffer, Phillips) 1
Bioluminescence
Effects of extremely low-frequency electromagnetic fields on bacteria —the question of a co-stressing factor (Mittenzwey et al.) 21
Biotechnology
Rapid and non-invasive quantification of metabolic substrates in biological cell suspensions using non-linear dielectric spectroscopy with multivariate calibration and artificial neural networks. Principles and applications (Woodward et al.) 99
Measuring living cells using dielectric spectroscopy (Gheorghiu) 133
Bovine serum albumin
Quartz-crystal microbalance and cyclic voltammetric studies of the adsorption behaviour of serum albumin on self-assembled thiol monolayers possessing different hydrophobicity and polarity (Anzai et al.) 35

Ca^{2+} flux
Ca^{2+} flux as a response of peritoneal exudative macrophages to weak alternating electric fields (Cai et al.) 15
Carbon paste electrode
Trace measurements of plasmid DNAs by adsorptive stripping potentiometry at carbon paste electrodes (Cai et al.) 41
Cell–cell interactions
Cell–cell interactions. A physical approach (Popescu) 153
Cell lysis
Tracer kinetic studies of melittin action on RBC membranes (Blaskó, Schagina) 9
Cell proliferation
The minimizing effect of electromagnetic noise on the changes in cell proliferation caused by ELF magnetic fields (Raskmark, Kwee) 193
Cell suspension
Measuring living cells using dielectric spectroscopy (Gheorghiu) 133
Shape effects on the dielectric behaviour of arbitrarily shaped particles with particular reference to biological cells (Vrinceanu, Gheorghiu) 167
Cellular division cycle
Measuring living cells using dielectric spectroscopy (Gheorghiu) 133
Cellular parameters
The derivation of cellular properties from dielectric spectroscopy data (Mihai et al.) 187
Ceruloplasmin
Electrochemical properties of some copper-containing oxidases (Yaropolov et al.) 49
Channel properties
Tracer kinetic studies of melittin action on RBC membranes (Blaskó, Schagina) 9
Chemical treatment
Changes in membrane electrical parameters of yeast following chemical treatment for protoplast isolation (Radu et al.) 159
Coelomic cells
Glucose activated bioluminescence of coelomic cells of *Lampito mauritii*: a novel assay of glucose (Haram et al.) 59

Cofactor regeneration
Active transport of protons and electrons driven by redox enzyme reactions via G3P/DHAP shuttle, a model. Kinetics of activity and evolution of redox potential gradients (Demmano et al.) 239
Conformation differentiation
Trace measurements of plasmid DNAs by adsorptive stripping potentiometry at carbon paste electrodes (Cai et al.) 41
Copper-containing oxidases
Electrochemical properties of some copper-containing oxidases (Yaropolov et al.) 49
Cyclic voltammetry
Quartz-crystal microbalance and cyclic voltammetric studies of the adsorption behaviour of serum albumin on self-assembled thiol monolayers possessing different hydrophobicity and polarity (Anzai et al.) 35
Cysteamine
Electrochemical investigation of binding sites of plantacyanin: blue, copper-containing protein of plants (Kuznetsov et al.) 249
Cytochrome c553
Electrochemical investigation of binding sites of plantacyanin: blue, copper-containing protein of plants (Kuznetsov et al.) 249

Dextran
Applicability of dielectric measurements in the field of pharmaceutical formulation (Benoit et al.) 175
Dielectric behaviour
Shape effects on the dielectric behaviour of arbitrarily shaped particles with particular reference to biological cells (Vrinceanu, Gheorghiu) 167
The derivation of cellular properties from dielectric spectroscopy data (Mihai et al.) 187
Dielectric imaging
Dielectric spectroscopy of biological cells (Asami et al.) 141
Dielectric spectroscopy
Rapid and non-invasive quantification of metabolic substrates in biological cell suspensions using non-linear dielectric spectroscopy with multivariate calibration and artificial neural networks. Principles and applications (Woodward et al.) 99
Measuring living cells using dielectric spectroscopy (Gheorghiu) 133
Dielectric spectroscopy of biological cells (Asami et al.) 141
The derivation of cellular properties from dielectric spectroscopy data (Mihai et al.) 187
Dielectric test
Applicability of dielectric measurements in the field of pharmaceutical formulation (Benoit et al.) 175
Drug absorption
Applicability of dielectric measurements in the field of pharmaceutical formulation (Benoit et al.) 175

Electrical parameters
Changes in membrane electrical parameters of yeast following chemical treatment for protoplast isolation (Radu et al.) 159
Electrical properties
Problems in equivalent circuit modelling of the electrical properties of biological tissues (McAdams, Jossinet) 147
Electrode-less method
Dielectric spectroscopy of biological cells (Asami et al.) 141
Electrode pretreatment
Electrochemical properties of some copper-containing oxidases (Yaropolov et al.) 49
Electrodiffusional flux
On the electrolyte transport mechanisms through fish intestinal cells A computer study (Movileanu) 261
Electrolyte transport
On the electrolyte transport mechanisms through fish intestinal cells A computer study (Movileanu) 261
Electromagnetic fields
Effects of extremely low-frequency electromagnetic fields on bacteria —the question of a co-stressing factor (Mittenzwey et al.) 21
The threshold for Na,K-ATPase stimulation by electromagnetic fields (Blank, Soo) 63
Electromagnetic noise
The minimizing effect of electromagnetic noise on the changes in cell proliferation caused by ELF magnetic fields (Raskmark, Kwee) 193
Electron transport
Electrochemical investigation of binding sites of plantacyanin: blue, copper-containing protein of plants (Kuznetsov et al.) 249
Electrotransformation
Electrotransformation of bacteria by plasmid DNAs: statistical evaluation of a model quantitatively describing the relationship between the number of electrotransformants and DNA concentration (Rittich, Španová) 233
Enzyme
Active transport of protons and electrons driven by redox enzyme reactions via G3P/DHAP shuttle, a model. Kinetics of activity and evolution of redox potential gradients (Demmano et al.) 239
Enzyme function
The threshold for Na,K-ATPase stimulation by electromagnetic fields (Blank, Soo) 63
Equivalent circuit modelling
Problems in equivalent circuit modelling of the electrical properties of biological tissues (McAdams, Jossinet) 147
Erythrocyte irradiation
Time course of the interaction of low level 2.45 GHz radiation with the erythrocyte membrane (Savopol et al.) 171
Experimental design
Evaluating the biological aspects of in vitro studies in bioelectromagnetics (Saffer, Phillips) 1

Glucose assay
Glucose activated bioluminescence of coelomic cells of *Lampito mauritii*: a novel assay of glucose (Haram et al.) 59

Heat stress
Effects of extremely low-frequency electromagnetic fields on bacteria —the question of a co-stressing factor (Mittenzwey et al.) 21
Hemoglobin loss
Time course of the interaction of low level 2.45 GHz radiation with the erythrocyte membrane (Savopol et al.) 171
Hg electrode
Adsorption of Cd,Zn-metallothionein on covered Hg electrodes and its voltammetric determination (Fedurco, Šestáková) 223
Human fibroblasts
Microelectrode recordings of the transmembrane potential of the nucleus and the cytoplasm in living human fibroblasts (Krammer) 67

Impedance spectroscopy
Impedance spectroscopy of interfaces, membranes and ultrastructures (Coster et al.) 79
Interfaces
Impedance spectroscopy of interfaces, membranes and ultrastructures (Coster et al.) 79
Intestinal cells
On the electrolyte transport mechanisms through fish intestinal cells A computer study (Movileanu) 261
Intracellular compartment
On the electrolyte transport mechanisms through fish intestinal cells A computer study (Movileanu) 261

In vitro studies
Evaluating the biological aspects of in vitro studies in bioelectromagnetics (Saffer, Phillips) 1
Ion channel gating
Possible role of surface electrochemical electron-transfer and semiconductor charge transport processes in ion channel function (Cavelier) 197
Ion leakage
Time course of the interaction of low level 2.45 GHz radiation with the erythrocyte membrane (Savopol et al.) 171
Ion pump
The threshold for Na,K-ATPase stimulation by electromagnetic fields (Blank, Soo) 63

Kinetics hemolysis
Time course of the interaction of low level 2.45 GHz radiation with the erythrocyte membrane (Savopol et al.) 171

Laccase
Electrochemical properties of some copper-containing oxidases (Yaropolov et al.) 49
Lampito mauritii
Glucose activated bioluminescence of coelomic cells of *Lampito mauritii*: a novel assay of glucose (Haram et al.) 59

Macrophages
Ca^{2+} flux as a response of peritoneal exudative macrophages to weak alternating electric fields (Cai et al.) 15
Melittin
Tracer kinetic studies of melittin action on RBC membranes (Blaskó, Schagina) 9
Membranes
Changes in membrane electrical parameters of yeast following chemical treatment for protoplast isolation (Radu et al.) 159
Impedance spectroscopy of interfaces, membranes and ultrastructures (Coster et al.) 79
Metallochlorophyll
Studies on the reduction of cobalt(II)-chlorophyll a on the platinum electrode (Xiao et al.) 257
Metallothioneins
Adsorption of Cd,Zn-metallothionein on covered Hg electrodes and its voltammetric determination (Fedurco, Šestáková) 223
Complexation properties of the metallothionein fragment Lys–Cys–Thr–Cys–Cys–Ala [56–61] MT I with zinc using square wave voltammetry (Nieto, Rodríguez) 215
Metastasis
Proliferative and metastatic activities of mouse tumor cells exposed to a strong static magnetic field (Tanioka et al.) 29
Microelectrode
Microelectrode recordings of the transmembrane potential of the nucleus and the cytoplasm in living human fibroblasts (Krammer) 67
Studies on the reduction of cobalt(II)-chlorophyll a on the platinum electrode (Xiao et al.) 257
Microtiter plate cultivation
The minimizing effect of electromagnetic noise on the changes in cell proliferation caused by ELF magnetic fields (Raskmark, Kwee) 193
Microwave effect
Time course of the interaction of low level 2.45 GHz radiation with the erythrocyte membrane (Savopol et al.) 171
Model
Active transport of protons and electrons driven by redox enzyme reactions via G3P/DHAP shuttle, a model. Kinetics of activity and evolution of redox potential gradients (Demmano et al.) 239
Modelling
Electrotransformation of bacteria by plasmid DNAs: statistical evaluation of a model quantitatively describing the relationship between the number of electrotransformants and DNA concentration (Rittich, Španová) 233
On the electrolyte transport mechanisms through fish intestinal cells A computer study (Movileanu) 261
Modified gold electrode
Electrochemical investigation of binding sites of plantacyanin: blue, copper-containing protein of plants (Kuznetsov et al.) 249
Multivariate calibration
Rapid and non-invasive quantification of metabolic substrates in biological cell suspensions using non-linear dielectric spectroscopy with multivariate calibration and artificial neural networks. Principles and applications (Woodward et al.) 99

Na,K-ATPase
The threshold for Na,K-ATPase stimulation by electromagnetic fields (Blank, Soo) 63
Neural networks
Rapid and non-invasive quantification of metabolic substrates in biological cell suspensions using non-linear dielectric spectroscopy with multivariate calibration and artificial neural networks. Principles and applications (Woodward et al.) 99
Neurotransmitter
Possible role of surface electrochemical electron-transfer and semiconductor charge transport processes in ion channel function (Cavelier) 197
Non-invasive
Rapid and non-invasive quantification of metabolic substrates in biological cell suspensions using non-linear dielectric spectroscopy with multivariate calibration and artificial neural networks. Principles and applications (Woodward et al.) 99
Non-linear
Rapid and non-invasive quantification of metabolic substrates in biological cell suspensions using non-linear dielectric spectroscopy with multivariate calibration and artificial neural networks. Principles and applications (Woodward et al.) 99
Non-spherical particles
Shape effects on the dielectric behaviour of arbitrarily shaped particles with particular reference to biological cells (Vrinceanu, Gheorghiu) 167
Nuclear membrane
Microelectrode recordings of the transmembrane potential of the nucleus and the cytoplasm in living human fibroblasts (Krammer) 67

On-line determination
Fast, in flux procedure to measure and preserve the growth medium parameters (Mehedintu et al.) 181
Oscillations
Possible role of surface electrochemical electron-transfer and semiconductor charge transport processes in ion channel function (Cavelier) 197

Photobacteria
Effects of extremely low-frequency electromagnetic fields on bacteria —the question of a co-stressing factor (Mittenzwey et al.) 21
pH-registration
Fast, in flux procedure to measure and preserve the growth medium parameters (Mehedintu et al.) 181
Physical approach
Cell–cell interactions. A physical approach (Popescu) 153
Plantacyanin
Electrochemical investigation of binding sites of plantacyanin: blue, copper-containing protein of plants (Kuznetsov et al.) 249

Plasmid DNA
Trace measurements of plasmid DNAs by adsorptive stripping potentiometry at carbon paste electrodes (Cai et al.) 41
Electrotransformation of bacteria by plasmid DNAs: statistical evaluation of a model quantitatively describing the relationship between the number of electrotransformants and DNA concentration (Rittich, Španová) 233
Proliferation
Proliferative and metastatic activities of mouse tumor cells exposed to a strong static magnetic field (Tanioka et al.) 29
Protein synthesis
Effects of extremely low-frequency electromagnetic fields on bacteria —the question of a co-stressing factor (Mittenzwey et al.) 21
Protoplast isolation
Changes in membrane electrical parameters of yeast following chemical treatment for protoplast isolation (Radu et al.) 159
Pulsation
Proliferative and metastatic activities of mouse tumor cells exposed to a strong static magnetic field (Tanioka et al.) 29

Quantum electrochemistry
Possible role of surface electrochemical electron-transfer and semiconductor charge transport processes in ion channel function (Cavelier) 197
Quartz-crystal microbalance
Quartz-crystal microbalance and cyclic voltammetric studies of the adsorption behaviour of serum albumin on self-assembled thiol monolayers possessing different hydrophobicity and polarity (Anzai et al.) 35

Red blood cell membrane
Tracer kinetic studies of melittin action on RBC membranes (Blaskó, Schagina) 9
Redox
Possible role of surface electrochemical electron-transfer and semiconductor charge transport processes in ion channel function (Cavelier) 197
Redox gradient
Active transport of protons and electrons driven by redox enzyme reactions via G3P/DHAP shuttle, a model. Kinetics of activity and evolution of redox potential gradients (Demmano et al.) 239
Regression analysis
Electrotransformation of bacteria by plasmid DNAs: statistical evaluation of a model quantitatively describing the relationship between the number of electrotransformants and DNA concentration (Rittich, Španová) 233
Repetitive firing
Possible role of surface electrochemical electron-transfer and semiconductor charge transport processes in ion channel function (Cavelier) 197
Respons inhibition
The minimizing effect of electromagnetic noise on the changes in cell proliferation caused by ELF magnetic fields (Raskmark, Kwee) 193

Self-assembled thiol monolayer
Quartz-crystal microbalance and cyclic voltammetric studies of the adsorption behaviour of serum albumin on self-assembled thiol monolayers possessing different hydrophobicity and polarity (Anzai et al.) 35
Square wave fields
Ca^{2+} flux as a response of peritoneal exudative macrophages to weak alternating electric fields (Cai et al.) 15
Square wave voltammetry
Complexation properties of the metallothionein fragment Lys–Cys–Thr–Cys–Cys–Ala [56–61] MT I with zinc using square wave voltammetry (Nieto, Rodríguez) 215
Static magnetic field
Proliferative and metastatic activities of mouse tumor cells exposed to a strong static magnetic field (Tanioka et al.) 29
Suspension conductivity
Fast, in flux procedure to measure and preserve the growth medium parameters (Mehedintu et al.) 181
Synchronized cells
Fast, in flux procedure to measure and preserve the growth medium parameters (Mehedintu et al.) 181

Technical variability
Evaluating the biological aspects of in vitro studies in bioelectromagnetics (Saffer, Phillips) 1
Thin layer spectroelectrochemistry
Studies on the reduction of cobalt(II)-chlorophyll a on the platinum electrode (Xiao et al.) 257
Tracer transport
Tracer kinetic studies of melittin action on RBC membranes (Blaskó, Schagina) 9
Transmembrane potential
Microelectrode recordings of the transmembrane potential of the nucleus and the cytoplasm in living human fibroblasts (Krammer) 67
Triphenylphosphine oxide
Adsorption of Cd,Zn-metallothionein on covered Hg electrodes and its voltammetric determination (Fedurco, Šestáková) 223
Tripiperidinophosphine oxide
Adsorption of Cd,Zn-metallothionein on covered Hg electrodes and its voltammetric determination (Fedurco, Šestáková) 223
Tumor cells
Proliferative and metastatic activities of mouse tumor cells exposed to a strong static magnetic field (Tanioka et al.) 29
Tyrosinase
Electrochemical properties of some copper-containing oxidases (Yaropolov et al.) 49

Ultrastructures
Impedance spectroscopy of interfaces, membranes and ultrastructures (Coster et al.) 79

Voltammetry
Adsorption of Cd,Zn-metallothionein on covered Hg electrodes and its voltammetric determination (Fedurco, Šestáková) 223

Yeast
Changes in membrane electrical parameters of yeast following chemical treatment for protoplast isolation (Radu et al.) 159
Yeast culture
Fast, in flux procedure to measure and preserve the growth medium parameters (Mehedintu et al.) 181

Zinc complexes
Complexation properties of the metallothionein fragment Lys–Cys–Thr–Cys–Cys–Ala [56–61] MT I with zinc using square wave voltammetry (Nieto, Rodríguez) 215
